NSR Hypercar – Evolution Never Stops.

A new legend is born: the first NSR HYPERCAR.

A completely new project, designed and engineered to compete at the highest level, with one clear purpose – ultimate performance.

An extensive development process has redefined bodywork, chassis, and mechanics, introducing innovative technical solutions and a deep commitment to research and engineering excellence.

Every decision has been made with one goal in mind: to create one of the most competitive NSR ever built.

Many important features are still “top secret” at the moment, but one thing is certain: The new NSR era has begun.

NSR

FOR THE NATURE

The climate change we are experiencing is presenting us with tragic scenarios that we cannot remain indifferent to.

NSR is constantly committed to the protection and respect for the environment. The entire energy needs of the company are managed through photovoltaic panels installed on the roof of the facility, producing 100,000 KW of green energy per year.

The machinery inside the facility is state-of-the-art, with low energy consumption and low environmental impact. Most of the components produced are made from recycled plastic, as well as the paper and cardboard used for packaging. The exhaust gases from production are regularly monitored and released into the environment through careful filtering systems to comply with the latest environmental impact and personnel safety standards. Living on this planet is our right; protecting it is our duty!

NSR is an Italian company that embodies true craftsmanship in the production of high-quality slot cars, entirely designed and manufactured in Italy. Founded on the innovative vision of Salvatore Noviello, NSR aims to redefine the racing experience with slot car models that combine exceptional performance with an obsessive attention to detail. Each replica, produced according to the highest Made in Italy standards, represents a passion for speed and competition — a philosophy that has guided NSR since day one.

A relentless pursuit of excellence and continuous technological advancement have made NSR a global benchmark in the industry.

Since 1985, NSR has earned an impressive list of titles that testify to the quality and reliability of our slot cars. With 18 world titles and over 40 Italian championships won, NSR continues to stand out in every competition thanks to its unwavering commitment to performance and technical precision. Every victory is the result of passion, innovation, and a constant drive for excellence.

DESIGN

The design process begins with choosing the category of slot car we want to reproduce. At this stage, we carefully evaluate the car model to be replicated, analyzing its technical and stylistic features.

Once the model has been selected, we make sure to obtain all the necessary licenses from the car manufacturer, ensuring full compliance with production rights and the highest level of accuracy in the final result.

Next, our experts create an advanced 3D model based on the original blueprints provided by the manufacturer. This process allows us to develop an extremely detailed replica that faithfully respects the proportions and complexity of the original car's design.

The result is a top-quality slot car — true to the aesthetics of the original and engineered to deliver outstanding mechanical performance, in line with our highest standards.

MOLDING & PRODUCTION

NSR uses sophisticated CAD/CAM files to develop production molds with an extremely high level of precision, made possible by the use of state-of-the-art CNC machines.

Each component of every mold is carefully crafted, assembled, and meticulously inspected to ensure it meets the highest quality standards.

Before moving into full-scale production, every mold undergoes a thorough inspection, assembly, and testing phase during pre-production.

This process allows us to guarantee a final result that not only meets all technical specifications but also delivers exceptional and long-lasting performance on the track.

PAINTING

To ensure a flawless and long-lasting finish, every component undergoes an advanced painting process.

After being carefully painted, the parts are transferred to a sealed environment specifically designed to prevent any dust contamination.

This strict control of environmental conditions allows the painted surfaces to dry perfectly, preserving the appearance and aesthetic quality of our slot cars – ready to excel both in performance and style.

PAD PRINTING

After drying, the bodies and parts are transferred to the pad printing room, where one of the most detailed and complex stages of the production process begins.

Here, using high-precision pad printing machines, we apply the liveries and decorations. The complexity of the final graphics determines whether we use machines with one, two, or up to five colors; for the most advanced designs, we employ a fully automated machine capable of delivering perfectly consistent, top-quality results.

Once the pad printing phase is complete, the bodies return to the painting room for a final transparent coating. This last step protects the decorations and gives the model a glossy, professional finish — preserving color vibrancy and quality over time.

ASSEMBLY

The assembly phase of every NSR slot car is divided into two distinct work areas to ensure meticulous attention to every single component: one dedicated to the mechanical assembly and the other to the finished body. This approach allows us to maintain the highest level of quality and precision at every stage.

In the mechanical department, the chassis takes shape starting from its bare structure, to which all the necessary components are gradually added. Each part is assembled with the utmost care to ensure the car is ready to deliver outstanding performance. As a final step, the motor wires are connected to the guide, completing the transmission system.

Once the chassis is perfectly assembled and tested, it is finally “joined” with the body, giving life to the finished product. This stage marks the culmination of the entire assembly process, combining mechanical precision with the refined aesthetics of the body — a result that embodies the quality and excellence that define NSR. Each model is now ready to compete at the highest level, representing the pinnacle of our technical and artisanal expertise.

QUALITY CHECK

The quality check process represents one of the most crucial steps in ensuring the excellence of NSR slot cars. Each body, coming from the lacquering phase, is carefully inspected to ensure it is flawless in every respect. If any paint or pad printing defects are detected, the body is discarded, ensuring that only perfect components proceed to the next stages.

The fully assembled model is then subjected to a thorough final inspection. During this phase, every detail is carefully checked to make sure nothing has been overlooked in the previous steps. Moving parts are lubricated to ensure smooth operation and optimal performance, and the model is track-tested to confirm its quality and performance.

Once all inspections have been passed, the finished model is placed in its display box, ready to be shipped to distributors around the world. This rigorous control process guarantees that every NSR slot car represents the highest standards of precision, quality, and craftsmanship.

Legends never die

We make collectors editions to celebrate specific cars or drivers that have made history.

Despite being collector's items, the cars included in these box sets are ready to race.

WRE

The WRE (World Race Endurance) is the main event organized by NSR that takes place every year.

It's the 24-hour world championship with drivers from all over the world battling incessantly throughout the event to claim the title.

Classic cars equipped with real lights and racing parts are used for this race.

It's an event in true spirit of competition, adrenaline, racing and fun.
